Cost	Will there have to be subscription fees(if so, how much) for the product to maintain itself? Is it possible for the product to follow a zero-cost structure?	N/A	Looking out for the pricing of the API provided by the news producer, looking for the balance point between cheap & quality. If a zero-cost structure cannot be followed further research on the right pricing margins for the product.	Cost is ultimately the backbone of this project, as without maintaining it the program's expenses would skyrocket, leading to failure of solving the problem. This creates a huge call to action of managing the cost portfolio for the project, charging subscriptions at the right price, without being over profit-minded, requiring deep research.	25/08/24
Consumer	How does the average consumer ultimately feel about the problem statement? How can the consumer contribute to the solution? Does the consumer consider this a innovative solution?	Conduct interviews with my target audience(everybody who consumes news, aged 13-60), about a few specific questions: • Do you consider this product innovative and life changing? • Do you have any specific recommendations for the idea?	N/A	The consumer is the reason for the product, meaning they should have a say in what the product should be. By allowing the target audience to contribute their thoughts, you are able to witness the problem through the eyes of the people who actually face it, allowing for a more directed and appealing product.	26/08/24
Safety	How does one consistently prevent a product from making mistakes, and thus spreading misinformation? What protocols can be employed to take down untruthful news?	N/A	Look into various articles online about the ethical and societal implications of using machine learning(A.I) in real life applications, which can be harmful or dishonest about a persona	It is vital to prevent your product from spreading the problem it is trying to solve, meaning secure protocols have to be in place. Otherwise, the problem becomes greater leading to failure of accomplishing the products goals.	27/08/24
Misc.	What form should this program take? Is it ethically acceptable to be using A.I in a field which requires careful placement of words, otherwise leading to false information?	Surveys shall be conducted for both of these issues, as it is always up to the consumer & target audience to decide what they hope to accomplish with the product, as well as take into consideration the downsides that may come with.	N/A	---	24/08/34
